SkillRadar: Spck Editor Android Setup Guide

Complete Handbook: Import, Run, Customize & Export on Mobile

Stack: Pure Vanilla HTML5, CSS3 & ES6 JavaScript

Target Environment: Spck Editor (or Spck JS) for Android | Zero npm/Node build required

1. Overview & What is Spck Editor?

Spck Editor is a popular Android code editor that provides an integrated developer environment for writing and running HTML, CSS, and JavaScript directly on your smartphone or tablet. It features code syntax highlighting, an internal web server, live browser preview with inspector/console, and Git integration without needing any computer or terminal.

2. Step-by-Step Installation & Setup

Step 1: Install Spck Editor

Open Google Play Store on your Android device. Search for "Spck Editor" (or "Spck Code Editor / Git Client") and install the free app. No account registration is required.

Step 2: Obtain the Project ZIP

Download the file "skill-radar-spck-android.zip" onto your phone (usually saved in your Android "Download" directory).

Step 3: Import into Spck Editor

Open Spck Editor. On the start screen, tap the "+" (New Project) icon at the bottom or open the left navigation drawer. Select "Import Zip", browse to your "Download" folder, and choose "skill-radar-spck-android.zip". Spck will automatically unpack the files into a new project.

Step 4: Launch Live Preview

Inside the project tree, tap on "index.html" to open the file editor. Look at the top toolb
built-in mobile browser will launch and display your interactive Skill Radar chart!

3. Project Files Explained

`index.html`	Semantic structure, Canvas viewbox, competency list, modal forms, and toolbar.
`style.css`	Mobile-first layout, touch targets (>=44px), dark & light themes, sliders, and responsive typography.
`app.js`	Pure HTML5 2D Canvas radar engine, presets (Android, Full-Stack, AI, DevOps), local storage, and export tools.
`manifest.json`	Allows you to "Add to Home Screen" as a standalone PWA on Android.
`README.md`	Quick instructions and documentation for future reference on your phone.

4. Customizing Your Skills in Spck Editor

You have two ways to adjust and add skills:
1. Visual UI: Open the live preview, tap "+ Add Skill", or use the interactive sliders directly on your phone.
2. In Code: Open app.js in Spck Editor, find the PRESET_DATA object near line 10, and customize names, default current scores, target goals, and categories. Save the file (Ctrl+S or Spck save button) and refresh preview!

```
// Example skill item in app.js:
{ id: "1", name: "Kotlin", category: "Language", current: 85, target: 95,
  notes: "Mastering coroutines & context receivers" },
```

5. Offline Storage & Backup Tips

- Auto-Save: Every adjustment is automatically saved to your mobile browser's localStorage.
- Backup JSON: Tap "Backup JSON" at the bottom of the app to save your custom profile as a .json file.
- Restore JSON: If you switch devices, tap "Restore JSON" and select your previously saved backup.
- Export PNG: Tap "Save PNG Chart" to generate a high-resolution snapshot of your radar polygon to share on GitHub or LinkedIn!

Congratulations!
You now have a fully portable, professional Skill Radar app running on your Android phone!
